Reason for Allowance

1. Regarding claims 1-6, the prior art fails to teach or suggest a method of incrementally updating a checksum in a network data packet header, the method comprising the steps of: calculating a partial one's complement sum by subtracting a reduced header part derived from the network data packet header from the checksum; and adding a value, comprising a checksum of the modified reduced header part, to the partial one's complement sum to create an incrementally updated checksum, in combination with other limitations, as specified in the independent claim 1.

Regarding claims 7-10 and 13, the prior art fails to teach or suggest a method of incrementally updating a checksum in a network data packet header, the method comprising the steps of: calculating a partial one's complement sum by subtracting from the checksum at least one of the plurality of header fields; adding to the partial one's complement sum a checksum value of the at least one modified header fields to obtain an incrementally updated checksum; and transmitting the data packet having the at least one modified header field and incrementally updated checksum from the packet processor, in combination with other limitations, as specified in the independent claim 7.

Regarding claims 11-12, the prior art fails to teach or suggest a method of incrementally updating a checksum in a network data packet header, the method comprising the steps of: calculating a partial one's complement sum by subtracting from the checksum at least one of the plurality of header fields; adding to the partial one's complement sum a checksum value of the at least one modified header field to obtain an incrementally updated

checksum; and transmitting the data packet having the at least one modified header field and incrementally updated checksum from the network switch, in combination with other limitations, as specified in the independent claim 11.

Regarding claims 14-23, the prior art fails to teach or suggest a system for incrementally updating a network data packet checksum, the system comprising: an input parser configured to identify one or more header fields that make up a reduced header part of an incoming data packet and to compute a partial one's complement sum from the reduced header part; and a circuit connected to the buffer memory for modifying the reduced header part, and computing an incrementally updated network data packet checksum from the modified reduced header part and the partial one's complement sum, in combination with other limitations, as specified in the independent claims 14 and 19.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
